

Areej's project pitch

Sami | سمي

SME Financial Readiness Engine

سمي، وش بغيتي؟

"Know where you stand. Know what to do next"

سمي |Sami is an **SME Financial Readiness Engine** that helps small and medium-sized businesses understand their **financial readiness before seeking financing**.

- ★ It analyzes business financial data, explains **where the business stands and why**, and provides clear, actionable next steps. **The idea is simple:** Instead of applying for financing without knowing where you stand, Sami helps you understand your position first.

Links could be opened via phone/tablets and so onnnn **(Important)** :)

More basic info to enhance your further understanding

The Problem

SMEs may have financing options available, but often struggle to understand:

- ★ Where they stand financially
- ★ What may be holding them back
- ★ What they should improve before applying
- ★ What their financial data actually means

‘The gap is not only access to financing.....it is financial readiness and clarity’

The Solution

Sami turns financial information into four simple steps:

Understand → Analyze → Explain → Act

1. **Understand** — Collect relevant financial information.
2. **Analyze** — Identify financial indicators and patterns.
3. **Explain** — Use Generative AI to make the results understandable.
4. **Act** — Provide prioritized recommendations and next steps.

Business Goals

- ★ Give SMEs clarity about their financial position.
- ★ Turn financial data into actionable insights.
- ★ Help businesses become better prepared before seeking financing.
- ★ Reduce friction between SMEs and financial institutions.

Why Saudi Arabia tho?

Saudi Arabia is rapidly developing its fintech and Open Banking ecosystem, while SME access to funding and financial readiness remain important priorities.

- This creates an opportunity to build a product that turns financial data into useful, understandable guidance for **Saudi SMEs**.

Why This Hackathon tho?

- ★ **Real Saudi problem** —> directly connected to SME financing.
- ★ **Fintech-focused** —> combines financial analysis and Open Banking.
- ★ **Meaningful AI** —> GenAI explains financial insights rather than simply acting as a chatbot.
- ★ **Realistic MVP** —> can be demonstrated using synthetic data and a mock Open Banking connection.
